DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The applicant recites a wafer having a plurality of test features placed thereon which project from the wafer surface. These test features are stated to be composed of a hard upper surface layer. The specification indicates that these test features are polished in a procedure wherein the process proceeds in a manner as depicted in Figure 1. This figure shows a timed sequence of the polishing process. It is not seen how if the test features 24 are composed of the same hard material how the test feature on 36 and 40 are removed prior to the features on elements 20 on the right of the drawing under T=2. If the material 24 is the same material for all elements 20, then the layers should be removed wherein each has a portion of element 24 thereon until the last bit is removed from all element 20s. Consequently, while the applicant claim is understandable the manner of polishing and the "polished" recitation on line 5 of claim 1 is not enabled by the specification. In other words, the examiner does not see how one would come up with the claimed device and achieve its aim in the polishing realm as highlighted in Figure 1.

Claims 12-22 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Steps in the formation of the magnetic head which are

Art Unit: 2825

critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

The subject matter of the claims is drawn to a method or process of fabricating a magnetic head upon a wafer surface. However, the only steps recited are to the CMP processes. No steps are provided coupling this process with the formation of the magnetic head. The specification only couples the use of this CMP step with the magnetic head in only a general and unknown manner.

.Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor Yevsikov whose telephone number is 571-272-1910. The examiner can normally be reached on Monday-Fridays 8:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew S. Smith can be reached on 571-272-1907. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
